(1) Must reinstall driver and authorize manufacturer in Security and Privacy System Preferences.

(2) Myricom NIC cards no longer supported by Sonnet. Contact [CSPi](#) for support. CSPi does not officially support macOS 10.13, but the drivers appear to work.

(3) Updated drivers available from [ATTO Technologies](#).

(4) Booting from RAID is not supported in High Sierra.

(5) macOS 10.13.4+ required

(6) See [support page](#) for more information about Graphics card and Mac compatibility.

(7) The RX560 is not yet compatible with macOS High Sierra. See [support page](#) for more information.

(8) P2 functional. SxS cards hot plug only when connected over Thunderbolt. CF cards don't mount.

(9) To read SxS cards, must reinstall [Sony driver](#) and authorize manufacturer in Security and Privacy System Preferences.

(10) Must plug in card before booting. After that, hot unplug works. Hot plug after booting does not work.
